TITLE: Low temperature properties of an isotropic ferromagnet in the case of arbitrary spin

SOURCE: AN SSSR. Doklady*, v. 158, no. 6, 1964, 1299-1301

TOPIC TAGS: low temperature research, ferromagnet, magnetization, spin wave

ABSTRACT: The results of some calculations of the magnetization of a ferromagnetic dielectric, in the case of arbitrary spin, are briefly reported. They differ from the calculations of S. V. Tyablikov (Fiz. met. i metalloved. v. 16, 321, 1963) in providing better cutoff for the chain of equations for the employed double-time Green's functions. The obtained corrections to the spin-wave energies are evaluated and the results agree with those obtained by

another method by Tahir-Kheli and ter Haar (Phys. Rev. 127, 95, 1962) and by Callen (Phys. Rev. 130, 890, 1963). An approximate expression is given for the magnetization in the case when the spin is much larger than $1/2$. "The author thanks Professor S. V. Tyablikov for suggesting this research and for many useful discussions." This report was presented by N. N. Bogolyubov. Orig. art. has: 24 formulas.

Title : The Colorimetric Determination of Rutin with
Uranyl Salts.

Orig Pub: Acta Polon Pharm, 15, No 1, 39-43 (1958) (in Polish
with English and Russian summaries)

Abstract: It has been found that solutions of rutin (I) give
a color reaction with a solution of $UO_2(CH_3COO)_2$
which can be used for the rapid and simple deter-
mination of I. Experiments have been made with a
view to the determination of the coordination number

"A New Method of Reconstruction of Large Postoperative Defects in the
Chest Wall."

Warsaw, Polski Tygodnik Lekarski, Vol 17, No 43, 22 Oct 1962; pp 1663-1668.

Abstract [English summary modified]: Based on Western surgical studies
and on their own experimental study in 3 groups of dogs in whom tubes of
woven polyester fiber "Elans" manufactured by the Centralne Laboratorium
Frzemyslu Dziwiarskiego were used to replace sections of large arteries,
authors used 23x15 and 10x7 cm pieces of pliable mesh made from same
fiber to replace massive chest wall defects in 2 female patients (scapular
osteochondroma, vertebral osteoma) with good results. Clinical details,
4 xentgenograms, 5 photographs; 12 Western, 4 Polish, 1 Soviet reference.

"Broncho-Biliary Fistula as a Complication After Cholecysto-
ctomy. Case Report."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 37, 9 Sep 63,
pp 1396-1398

Abstract: [Authors' English summary] Authors describe the
case of a 68-year old woman, who had had a cholecystectomy
performed because of cholecystitis due to cholelithiasis and
who developed a broncho-biliary fistula after the operation.
She expectorated about 150 cc puro bile daily, and complica-
tion was due to acute cholangitis in post-operative course.
Patient was treated with a wide range of antibiotics, and
occlusion of the fistula and healing of the patient was
achieved. There are seven (7) Western references.

7200. MEASUREMENT OF INTRACARDIAC TEMPERATURES DURING THE ELECTRICAL DEFIBRILLATION OF THE HEART. EFFECT OF VARIOUS VOLTAGES - Doświadczalne pomiary ciepłoty wewnątrzsercowej w czasie przepływu różnych prądów defibrylujących - Bross W., Klisiecki A., Nowacki P., Koczorowski S., Topiński S. and Aroński A. Zakł. Fiziol. A.M., Wrocław; Zakł. Elektrotechn. PAN, Warszawa - KARDIOL. POL. 1958, 1/5 (291-296) Tables 1 illus. 3

Ventricular fibrillation was provoked in dogs by applying low voltage directly to the heart. The experiment was made in 18 anaesthetized animals. Currents of 120 and 220 v. a. c. were used for defibrillation. Intracavit and intramural temperatures of the heart were measured with the thermistor thermometer. In some animals a current of 120 v. did not stop the fibrillation and 220 v. had to be used for effective defibrillation. These voltages did not cause any dangerous increase of intracardiac temperature if the duration of electrical impulses did not exceed 0.1-0.2 sec. When applying 220 v. for 2 sec. a 15°C. rise of temperature was observed. This increase may cause coagulation of the myocardium. The authors are of the opinion that a current of 220 v. may be safely applied for 3-4 defibrillating impulses lasting not more than 0.1-0.2 sec. each.

"A New Method of Reconstruction of Large Postoperative Defects in the
Chest Wall."

Warsaw, Polski Tygodnik Lekarski, Vol. 17, No 43, 22 Oct 1962; pp 1663-1668.

Abstract [English summary modified]: Based on Western surgical studies
and on their own experimental study in 3 groups of dogs in whom tubes of
woven polyester fiber "Elana" manufactured by the Centralne Laboratorium
Przemyslu Dziwiarskiego were used to replace sections of large arteries,
authors used 23x15 and 10x7 cm pieces of pliable mesh made from same
fiber to replace massive chest wall defects in 2 female patients (scapular
osteochondroma, vertebral osteoma) with good results. Clinical details,
4 roentgenograms, 5 photographs; 12 Western, 4 Polish, 1 Soviet reference.

Budapest, Orvosi Hetilap, Vol 103, No 46, 18 Nov 62, pages 2171-2175.

Abstract: [Authors' summary] On the basis of a successful operation
and good therapeutic success, the authors recommend the procedure
described for the treatment of Fallot trilogy. This was the first
radical surgery of this type performed in Poland.

"Clinical Observations on the Use of Long-Acting Sulfonamides (Madribron)."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 35, 26 Aug 63, pp 1303-1306

Abstract: [Authors' English summary modified] Authors observed the effect of sulphamedioxine on 67 patients with chronic infections of the gall bladder and biliary tract, with infections of the respiratory tract and nasolaryngeal cavity, and with cystitis or pyelitis, as well as a prophylactic measure in others. Good results were obtained in 86% of the cases, and even though extent of study is too small for definite statement, longacting sulphonamides are likely to replace antibiotics in mild infections and in aseptic operations in the opinion of the authors. 14 references: one Soviet, 2 each German and Swiss, and 9 Polish.

ND ✓ The action of potassium on neuromuscular excitability.
Raul Broșteanu and Radu Ernest Broșteanu. *Comun.
Acad. Rep. Populare Române* 2, 175-8(1952). Potassium
administered as KCl does not modify the neuro-muscular
excitability of a sciatic-gastrocnemius prepn. of *Rana viri-
dans*. At concns. of 10^{-4} to 10^{-3} K causes a decrease of the
nervous and muscular chronaxia. Concns. higher than
 10^{-3} produces irreversible destructive lesions. The action
of K is extended to both nervous and muscular chronaxias.
